

Campus Events Centralized Platform

Alex Trumble, Evan Rodriguez, Olumide Ayo, and Lydia Kabiru

12/6/2024

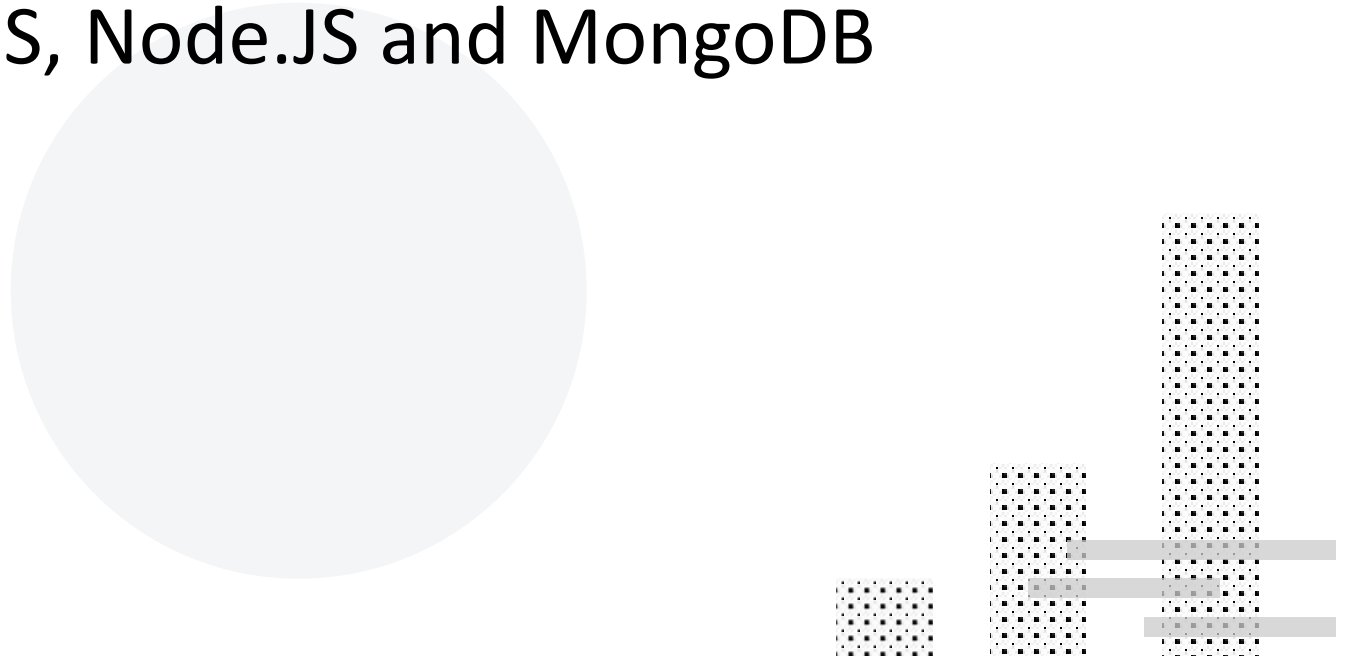

The Problem

- Plenty of groups looking for experiences on campus
 - Lists spread throughout endless webpages and social media accounts
 - An online system for organizers and individuals to connect can vastly help
- 
- 

Implementation

- Web-based system
 - Runs on EJS, Node.JS and MongoDB
- 

Design and Accessibility

- Plenty of feedback was given about the visuals of the testing phase
- The following is an example of visual improvement...

Account Creation

Project Management and Team Dynamics

- Casual environment
- Show Sprints and Production Plan

2	link front end to the back end	9/12/24	Alex Trumble
2	layout to see the event menu	9/12	Olumide Ayo
2	use event database to display event	9/12/24	Evan Rodriguez
2	Add form validation for the required fields and appropriate formats	9/12/24	Olumide Ayo
3	Allow users to edit or delete their submitted events	9/12/24	Lydia Kabiru

Allow users to edit or delete their submitted events

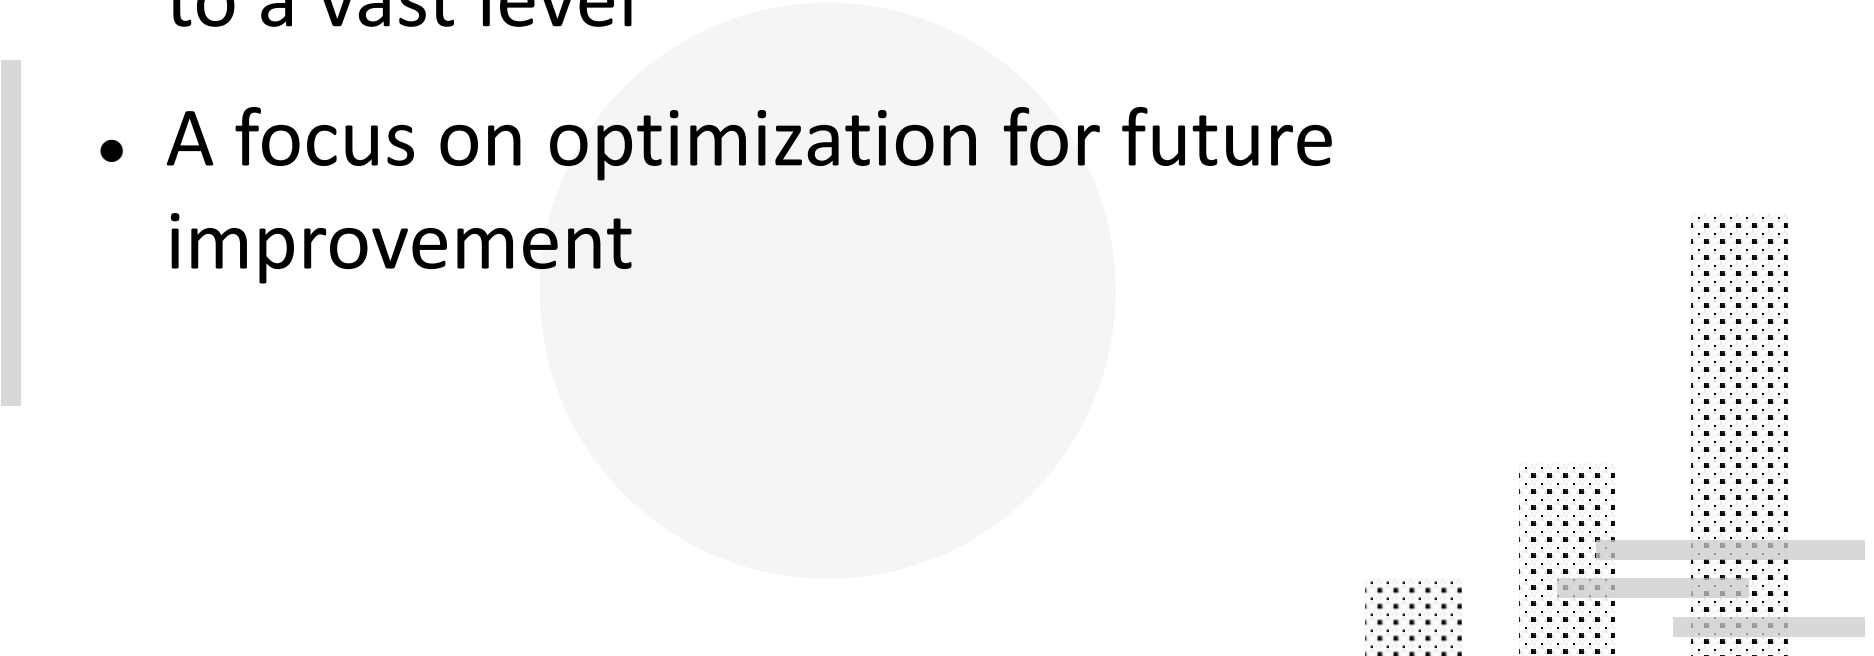

Implement backend logic to save submitted account data to the database

Design an event submission form with fields like event title, description, date, time, and location

Read CSS articles and prepare design concepts.

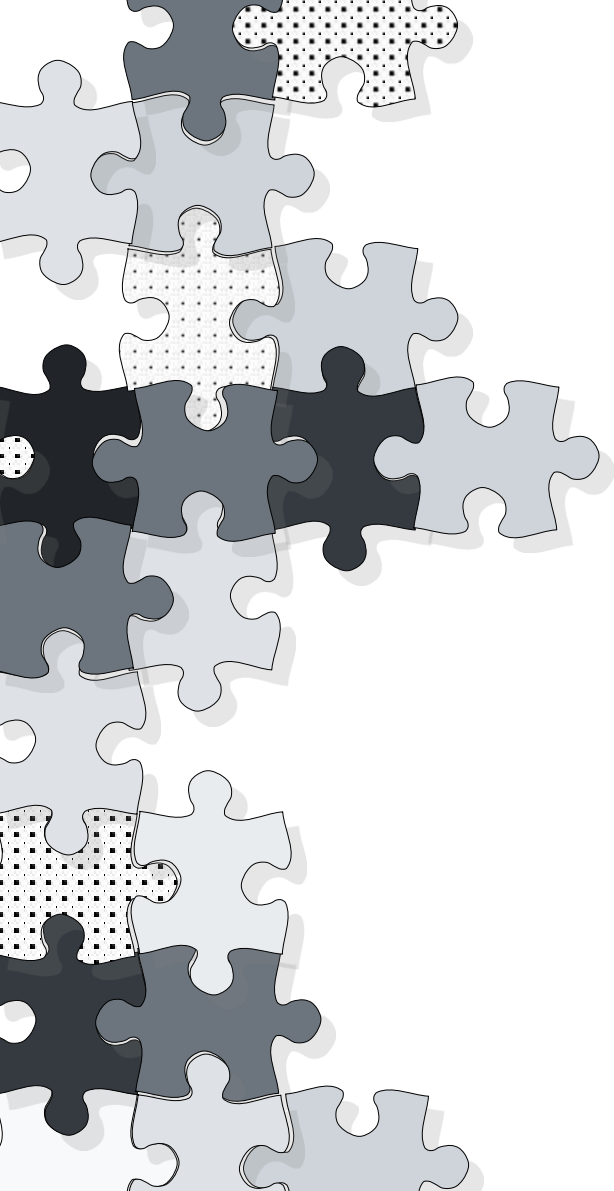

Future Prospects

- The current system is viable, and can be scaled to a vast level
 - A focus on optimization for future improvement
- 

Live Demonstration

Technical and Professional Growth
